

# EFV NATUREKIDS YOUTH !1+

**FEBRUARY 18**  
**1:00-3:00 pm**

Meeting at Thin Red Line Aerospace [Unit 208 - 6333 Unsworth Rd.](#) On this link there is a street view photo showing two orange doors, please use the left door. (Red truck will be parked between the doors).

## *Human Requirements for Life*

Aerospace engineer **Maxim de Jong** will get us thinking about our carbon footprint on Earth by looking at human requirements for life in space. Working on NASA projects involving space exploration gives him a unique viewpoint on how we have evolved to live on Earth and how very little we need to survive.

After the presentation, join us for a turn on the climbing wall and snacks. Maxim will be available to describe his current projects.
